

Wire Forming and Binding F 95 a „In-line“

Production line for books and stationery products*, even with oversized cover or back board.

- Production of the binding elements on the double wire forming machine F 95 a.
- Binding diameters from 1/4" to 1", having pitch 3:1 or 2:1.
- Equipment of the forming machine according to the required diameter for binding.
- Connection from the forming machine to the binding machine F 162 a via the connecting table F 95 a 926.
- Automatic "stop" of the forming machine when no binding element is needed.
- The required number of loops is set at the binding machine.
- Cutting of the binding length and transport to the inserting station.

- Perfectly binding secure is achieved as a result of inserting the punched sheets into the binding elements.

- Manual feeding of the product to a touch-free cycle switch and automatic start of the further working processes:
 - Closing of the binding.
 - Simultaneously cutting and positioning of the next binding length.
 - Shingled delivery onto the delivery exit belt.
- Also for the use of pre-formed binding elements from spools.

* For products without calendar hangers and skip-binding.

- Insertion of the pre-punched product into the binding elements.
